The Bologna Semester Plan (50 Marks Total)

1. **Project Initiation Package: Blueprint, Search Strategy & Layout Audit (10 Marks):**
   + **Timeline:** Handed out: Week 4 — **Submitted:** End of Week 6
   + **Syllabus Sync:** Builds directly on Week 1–3 structural rules and matches Week 6 Theory (Literature Synthesis & Querying).
   + What students submit (A single 3-part document):
     * **Part A (Topic Blueprint):** Their official graduation project title, problem statement, and 3 core research questions.
     * **Part B (Digital Search Log):** The exact Boolean search strings (AND, OR, NOT) used to look up targets on IEEE Xplore or Google Scholar.
     * **Part C (Technical Layout Audit):** A rapid review of an old departmental project to verify if it follows the exact structural components, abstract past-tense rules, and formatting layout boundaries taught in class.
2. **Midterm Examination (10 Marks):**
   Timeline: Conducted strictly during Week 7, covers week 1-6.
3. **Automated BibTeX Reference Library (10 Marks):**
   + **Timeline:** Handed out: Week 8 — **Submitted:** Week 10
   + **Syllabus Sync:** Aligns perfectly with Lab 7 & Lab 9 (Automated Reference Management using BibTeX).
   + **What students submit:** A compiled flat-file reference database (.bib) inside TeXstudio containing 5 peer-reviewed papers mapped cleanly to their graduation topics using verified BibTeX keys.
4. **The 3-Minute Thesis Pitch Presentation (10 Marks):**
   + **Timeline:** Prepared: **Weeks 12–13 — Delivered live under panel review:** Week 14
   + **What students do:** Modularly extract text from their LaTeX files into a clean, low-density PowerPoint presentation matrix to pitch and defend their engineering methodology.
5. **Academic Peer Review & Methods Critique (5 Marks):**
   + **Timeline:** Completed in Week 14.
   + **Syllabus Sync:** Matches Week 14 Theory (Peer Review Simulation: Reading, evaluating, and critiquing formal academic reports).
   + **What students submit:** A 250-word analytical evaluation looking past layout rules to audit the actual content, evaluating methodological limitations, data constraints, and research gaps of a study.
6. **Continuous Lab Workload Accountability & Attendance (5 Marks):**
   + **Timeline:** Monitored continuously across Weeks 1–15.
   + **What it evaluates:** Workload consistency, syntax compiler debugging efficiency (troubleshooting unescaped active strings), and final asset package assembly.
